

Solution Requirements

Date	1 July 2026
Team ID	SWTID-2026-7714
Project Name	Credit Card Approval Prediction
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system *should do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system *should be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	User Registration and Login	Users can register and securely log in to access the system.	High
2	Input Application Data	Users can enter credit card application details (personal, financial, employment, etc.).	High
3	Data Validation	The system validates input data for completeness, format, and rules.	High
4	Credit Score Integration	The system fetches credit score and credit history from the credit bureau API.	High
5	Feature Processing	The system preprocesses and prepares the data for model prediction.	Medium
6	Credit Card Approval Prediction	The system predicts the approval probability or decision using ML model.	High
7	Decision Explanation	The system provides key factors/ reasons influencing the approval or rejection.	Medium
8	Application Status Tracking	Users can view the status of their application.	Medium
9	Notifications	The system sends email/SMS notifications for updates and decisions.	Medium
10	Admin Dashboard	Admins can view applications, model performance, and system logs.	Medium
